DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Chakeres (6533794). Chakeres discloses a MRI based diagnostic imaging apparatus for guiding an interventional apparatus by positioning a patient within the imaging volume of the diagnostic apparatus, using the imaging means for acquiring a diagnostic image in an imaging plane comprising a target area of the patient, and using the visualization means for visualizing a projection of the imaging plane of the diagnostic image on the patient's skin (abstract, col. 7 lines 47-67, col. 8 lines 1-8, claim 16). The steps include calculating an approach trajectory for the interventional apparatus comprising an entry point on the patient's skin and a target point within the target area and inserting the interventional apparatus in the patient according to the calculated approach trajectory (col. 8 lines 12-37).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chakeres in view of Riehl et al. (4629989). Chakeres does not teach an adjustable light fan as the visualization means. In the same field of endeavor Riehl et al. disclose a patient alignment system utilizing light fan beams (col. 3 lines 37-68, col. 4 lines 1-13). It would have been obvious to one of ordinary skill in the art to use the teaching by Riehl et al. to modify the teaching by Chakeres for the purpose of precisely positioning the patient (abstract).
